Assignment 1

Consider the features in a Metadata tool that might make Data Governance more rewarding for users. Some questions to get you started (do not be limited by these)

- You might like to start by thinking about the differences between high trust environments and low trust environments (A rich Metadata store is a high trust environment and Facebook is a low trust environment)

- What drives you to send Tweets, post on Instagram, play games online, leave a review on Amazon?

- You are in a strange city and are hungry. How do you choose where to eat?

- Why do people like me spend their free time editing Musicbrainz?

Assignment 2

- Metadata is
  - Structured
  - Quite complex
  - Mostly Textual
  - Wide-ranging

- How might recent innovations in Machine Learning, AI and LLMs be applied to improve the management of metadata?

- What are the risks of doing so?

- How might these risks be mitigated?
